Why use Pool Measure Pro?

- Designed to help you avoid common measurement issues.
- Catch problems before leaving the customer site – no more data holds from the fabricator.
- Voice recognition for fast and easy measuring.
- Take pool-side photos to let the designer see the pool like you do.
- Send your measurements electronically – no more faxing or searching for measurement forms.
- Clean, clear measurement reports for your records.
- Have confidence the liner or safety cover will fit the pool perfectly the first time.

Fast Data Entry

The user interface is specifically designed to measure safety covers and pool liners.

Pool Measure Pro's data screens are tailor-made to work on mobile devices, allowing for fast data entry right from the pool side.

Voice Recognition

NEW

Use your voice to enter your measurements.

Support for voice recognition and speech output to read back your measurements frees your hands for the tape measure. You can even use a Bluetooth headset to work easily in noisy backyards.

Instant Feedback

Your AB measurement data is plotted as you enter it, giving you immediate visual feedback as you work at the pool side. That means you'll see any measurement issues as they occur, so you can correct them on the spot.

Intelligent Warning System

No more return visits for additional measurements. An intelligent warning system catches common issues and oversights, allowing you to correct them before leaving the customer site.

Direct Electronic Submission

Send measurement data to the fabricator directly from the pool side. Or submit your measurements back at the office from your WIFI network – you don't need a mobile data plan or a strong mobile signal.

Preferred Vendors List

Send your measurements for **FREE** to any of the fabs or distributors on our preferred vendors list.
